Ethereum Killers

Summary

ethereum

Ethereum is a global, open-source platform for decentralized applications. In other words, the vision is to create a world computer that anyone can build applications in a decentralized manner; while all states and data are distributed and publicly accessible. Ethereum supports smart contracts in which developers can write code in order to program digital value. Examples of decentralized apps (dapps) that are built on Ethereum includes tokens, non-fungible tokens, decentralized finance apps, lending protocol, decentralized exchanges, and much more.
